

**Abstract of the Disclosure**

A portable wheeled dolly for transporting a receptacle of articles, such as a quantity of baseballs to a practice field, where the dolly comprises a pair of spaced apart, elongated frame members, and a U-shaped handle engaging respective first ends of said frame members.

- 5 Hingedly positioned along a midpoint of the of the frame members is a pivotal platform which functions as a transporting support surface for the receptacle, or as a seat in a static mode. A pair of wheels are provided in proximity to the second ends of the frame members, where the wheels are vertically spaced from the second ends to avoid ground contact in the
- 10 static mode, but in rolling contact in the transporting mode.
